ABSTRACT

The outbreak of covid -19 in March 2020 has immensely affected the educational system of the world. It has forced to close down the educational institutions which has adversely affected the personal interaction of students and teachers. During this pandemic E-learning has been emerged as a new way of teaching. Most of the educational institutions at across the world have adopted the online education system in order to keep the academic activities going on. As compared to developing countries of the world the education system of developing countries like India has been adversely affected due to technical constraints and various economic issues. In this paper an attempt has been made to understand the students perspective towards online education in the state of Punjab which is mainly an agrarian economy and majority of the population approximately 62.51 percent of the total population reside in rural areas. The present study is mainly based on primary data and the questionnaire was randomly filled through online google form from the students studied in various colleges and universities of Punjab . A total of 150 respondent have participated in the study. The information related with the demographic profile of the students , the device used by the students during online teaching, and students perception regarding online education has been collected.
