Improved Citescore

We have updated the CiteScore methodology to ensure a more robust, stable and comprehensive metric which provides an indication of research impact, earlier. The updated methodology will be applied to the calculation of CiteScore, as well as retroactively for all previous CiteScore years (ie. 2018, 2017, 2016...). The previous CiteScore values have been removed and are no longer available.

Welcome To Joics

Joics publishes original papers of high scientific value in all areas of information and computational science. The main interest of Joics is in papers that describe and analyze new computational techniques of solving scientific or engineering problems in information science including

- Numerical Analysis
- Computer Graphics
- Scientific and Engineering Computing
- Computing Visualization
- Computational Geometry
- Image Processing
- Wavelets and Fractals
- Intelligence Computation
- CAD/CAM/CAE
- 3D Object Recognition
- Finite element

Abstract

Strongly recommended a re-configuration of the entire health system where the government will have a major role to play, UHC has proposed making health care an entitlement to every citizen. In an era where inclusive development is being emphasized as the right path towards sustainable development, focused initiatives for the welfare of disabled persons is essential. In India, especially in Punjab, a majority of the disabled resides in rural areas where accessibility, availability and utilization of services and its cost effectiveness are the major issues to be considered. With this background, this paper focused dimensions of disability in India and particularly in Punjab and also studies various policies and programs relating to disabled population in India and thereby need to strengthen health care and service delivery to disabled population in the country through Universal Health Coverage. The study reveals that number of disabled in Punjab and India are continuously increasing and their problems are very complex, but the available resources are very scarce, social stigma is still attached and people attitudes are so damaging. Children with disabilities face a number of barriers to achieving their full potential. Due to various hurdles, particularly for those who are poor and who suffer other forms of humiliations, the families of these children frequently experience high levels of stress. Despite the efforts of governmental and non-governmental organizations(NGOs), there is still a significant need to facilitate access to children with disabilities to educational institutions and to education in general. For achieving this task, it is necessary to change public attitudes, remove social stigma, provide barriers free environment, needs reformation in the areas of policy at institutional level.

Introduction

Strongly recommended a re-configuration of the entire health system where the government will have a major role to play, UHC has proposed making health care an entitlement to every citizen. Health care be offered as a National Health Package in India covering all common conditions, high impact health care requirements to all persons including disabled population.
