INTRODUCTION

The website implemented using ASP.Net. In this modern era, a website is necessary for each and every purpose. Online Gift Store Website will provide easy and fast access to its resources. This website has modules like Admin, Home, Customer, Brand, Category Info etc. and any other information about products such as list of products, various discounts available in the products, shipping detail, tracking detail, different rules and regulations of website etc. Its interface will be user friendly and easily to understand. All the information for which is required for general peoples is also available in the website. Customers can easily order the product online, either in India or outside of India by using the credit card or any another method in which he/she will be convenient. There are many unique features in the project. It has less amount of paper work. It requires a computer (hardware and software components). To access this website computer must have an internet browser installed. This Project also keeps login for the administrator and password for them as security purposes so that no other person can access the databases without the administrator permission.

The software will be used by two different types of users namely: -
